

BIODIVERSITY POLICY

SEGER, being aware of the economic, social and environmental importance of biodiversity; of ecosystems It promotes biodiversity and raises awareness among its stakeholders. This Policy has a positive relationship with nature and defines behavioral principles for the development of a sustainable business model. While fulfilling our commitments regarding biodiversity, we take into account the following basic principles we take it.

- By adopting a protection hierarchy and integrating best practices into the business model throughout the life cycle; promotes actions for the renewal and conservation of natural heritage, protects biodiversity, enhances natural capital We ensure sustainable use.
- Throughout the life cycle of our business, we analyze its effects on natural capital and its dependencies on biodiversity. We focus and research.
- Taking into account stakeholders' biodiversity needs and expectations and increasing biodiversity, We cooperate with our stakeholders to protect and respect flora and fauna.
- We educate all our employees and stakeholders about the importance of preserving and preserving biodiversity through trainings and meetings. We carry out awareness activities regarding
- Flora and fauna to continuously evaluate the interaction of infrastructure with the environment; especially protected/we strive to protect sensitive species.
- We work together with our suppliers to prevent deforestation.
- We set targets by including natural capital and biodiversity management in our Environmental Management System.
- Our activities may lead to the extinction of the IUCN (International Union for Conservation of Nature) Red List of Threatened Species. We make sure it doesn't open.
- All our employees are aware of this policy and support the implementations.
