

## WATER RESOURCES MANAGEMENT POLICY

Our water resources management policy and operations based on sustainability principles, It is a fundamental requirement for our future activities and future generations.

Water is a vital resource for both our operations and the planet, but increasingly is decreasing. We take responsibility to increase the efficiency of water management.

This policy extends our value chain (customers) to promote best practices in water efficiency and suppliers) as well as our commitment to improving our own water management reveals. Our Policy, Our Sustainability Strategy and the United Nations' Sixth It is compatible with the Sustainable Development Goal of Clean Water and Sanitation.

### In order to achieve our strategic goal with this responsibility;

- We ensure the safety and efficient use of water resources and take the necessary responsibility.
- We facilitate and encourage the reuse/recycling of water and its appropriate use.
- We understand and internalize the effects of climate change on water.
- We work to ensure that all our stakeholders adopt the culture of water conservation.
- We work to minimize risks to protect and increase water efficiency.
- We ensure the integration of water management into our long-term business and sustainability strategy.
- While trying to prevent pollution of natural water resources, we optimize our operating water usage efficiency.
- We continue to develop the expertise and skills of our teams.
- We welcome your feedback and thoroughly investigate every issue submitted to us we consider it as an opportunity to improve.
