

ENERGY MANAGEMENT POLICY

Managing SEGER's carbon emissions is one of our core objectives. We are passionately committed to achieving our goal of reducing our **Scope 1 and Scope 2 emissions by 50% by 2030 and becoming carbon neutral by 2050.**

In line with this commitment;

- We are committed to integrating the ISO 50001 energy management system into our operational processes and ensuring its continuity.
- We are aware of the environmental impact of our energy consumption and aim to reduce this impact at our facility.
- We carry out the design of our products by considering energy performance in our long-term planning.
- We prioritize design related to energy efficiency and energy performance, considering it a part of our supply chain.
- We review and record monthly energy data in accordance with our sustainable aims and targets. We ensure all our employees have access to information and resources.
- We identify and integrate best practices for energy efficiency into our processes.
- We conduct continuous improvement activities to reduce energy consumption in our operations.
- We closely follow technological developments to ensure energy efficiency.
